

V21 10 GROUNDWORKER

A WEIGHT OFF YOUR FEET

WEIGHT

Weighs just 1,100 grams. If you walk in them for 10,000 steps, you'll have carried around one less hippo compared to a standard wellington - a saving of 3 tonnes a day.

3 TONNES LIGHTER

WEAR

Twice as durable than its rubber sole alternatives. With it, you could walk 30 marathons before the sole tread wore through. That's the same distance as walking from London to Edinburgh and back.

FLEX

No significant damage was caused by the

500,000-FLEX

test. That's three times the number of the World Record amount of bicep curls set by a team in 1995.

RESISTANCE

The Groundworker was tested against

CHEMICALS & SUBSTANCES

Not only did these include Ammonium Chloride and Zinc Sulfide but also:

- Mayonnaise
- Butter
- Alcohol

PIERCE RESISTANCE

Groundworker's midsole is **pierce-resistant to**

1,100 NEWTONS

and is so strong that if a giant panda stepped on a nail while wearing a pair it would be tickety-boo.

INSULATION

The outsole resists temperatures down to -17° . This means you could walk to the summit of Everest (in the summer) wearing Groundworker and its thermal insulation would keep your feet toasty warm.

-40°C

PROTECTION

If the following things were dropped on your feet from 1 meter while wearing Groundworker, you'd be protected:
